

FIG. 1

Fig. 1 is a schematic cross-sectional view of a multi-chambered device, likely a medical device such as a catheter or probe. The device is symmetrical about a central vertical axis. It features a central shaft (2) with a handle (3) at the top and a distal tip (4). The shaft is surrounded by a series of chambers or segments (5, 6, 8, 9) separated by partitions (11, 12). The outer casing (30) has a flange (30a) at the top. The device is shown in a cross-section with various internal components labeled with numbers 1 through 31.

Fig. 1 is a cross-sectional view of a multi-chambered device. A central vertical shaft (2) passes through the device. The device has a main body (1) with multiple internal chambers (5) separated by partitions (6). The outer casing (1) has a flange (20) at the bottom. The internal chambers (5) are connected to a common passage (3) at the bottom. The device is shown in a cross-sectional view with various components labeled with numbers.
